

## Air Quality Summary – February 2026

The highest daily Air Quality Index (AQI) value for the month was 58 (MODERATE), which was based on a 24-hour average PM<sub>2.5</sub> mass concentration of 12.8 µg/m<sup>3</sup> recorded on the 12<sup>th</sup> at the Spokane – Sprague & Haven air monitoring station (**Figure 1** and **Table 1**). The highest daily AQI value for PM<sub>10</sub> was 30 (GOOD, 24-hour mass concentration = 32 µg/m<sup>3</sup>, February 10<sup>th</sup> at Spokane – Augusta & Fiske). Higher PM<sub>10</sub> and PM<sub>2.5</sub> concentrations were measured in January than February (**Table 2**). The AQI was in the GOOD category on 22 days and MODERATE on 6 days in February (**Table 3**).

**Figure 1: Daily Air Quality Index (AQI) values for February 2026. The data represent the maximum AQI values for PM<sub>10</sub> and PM<sub>2.5</sub> across the air monitoring network in Spokane County (excludes SensWA low-cost sensor data).**
