

Spokane Regional Clean Air Agency Air Quality Report - May 2020

The Air Quality Index (AQI) remained in the GOOD category all month (Figure 1). The maximum daily AQI of 49 based on ozone (8-hour average ozone concentration = 0.053 ppm) was recorded at Turnbull National Wildlife Refuge on May 28th (Table 1).

Figure 1: Air Quality Index (AQI) values for May 2020. The data represent the maximum AQI values across all monitoring stations within Spokane County.

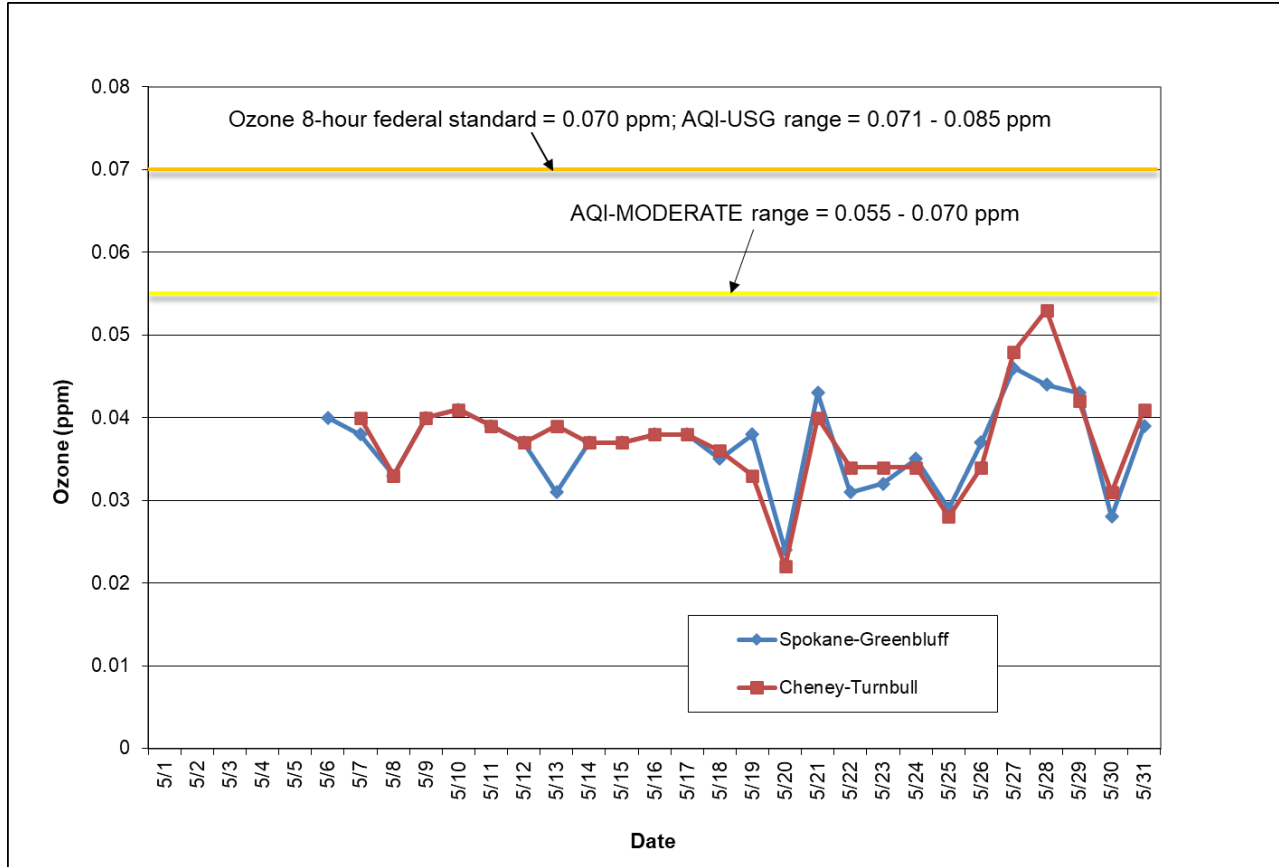

See Appendix 1 of this report for information about federal air quality standards or Appendix 2 for a description of the AQI. Daily mass concentrations of PM_{2.5} monitored in May throughout the network are shown in Figure 2. The maximum daily PM_{2.5} reading for the month was 10.0 µg/m³ recorded at Spokane-Augusta & Fiske on the 30th.

Figure 2: Multi-station 24-hour average PM_{2.5} for May 2020; Spokane County.

As stated at the beginning of this report, the maximum 8-hour running average ozone concentration for the month was 0.053 ppm (AQI = 49) recorded at Turnbull National Wildlife Refuge on the 28th (Figure 3). Eight-hour average ozone concentrations in the range 0.055 to 0.070 ppm are considered “moderate” air quality by the AQI. When concentrations are below that level, air quality is “good” with respect to ground-level ozone. In Washington State, ground-level ozone is monitored May through September each year.

Figure 3: Eight-hour maximum ozone concentrations for the Spokane region in May. The threshold for the moderate category of the AQI for ozone is 0.055 ppm averaged over eight hours. An ozone measurement above 0.070 ppm, averaged over eight hours, is the level of the federal ozone standard. It is not a violation of the standard to exceed this level on a given day because determination of attainment status is based on averaging data over a period of years. See Appendix 1 for more detailed information about attainment of federal air quality standards.

The daily air quality data for May for all monitoring stations in the Spokane region are provided in Appendix 3. Current and historical air quality data can be obtained electronically from Ecology’s air monitoring data website, <https://fortress.wa.gov/ecy/enviwa/Default.htm>.

Tables 1 and 2 contain the maximum AQI values for each pollutant for the month and for the year to date. Table 3 summarizes the year to date daily AQIs by category. See Appendix 2 for an explanation of the AQI.

Table 1: Maximum AQI values and pollutant concentrations for this reporting period.

| Pollutant | AQI | | Location | Date |
|-------------------|--------------------------------------|------|---------------------------------------|------|
| O ₃ | 49 (conc. = 0.053 ppm) | Good | Turnbull NWR | 5/28 |
| PM ₁₀ | 37 (conc. = 40 µg/m ³) | Good | Turnbull NWR | 5/30 |
| PM _{2.5} | 42 (conc. = 10.0 µg/m ³) | Good | Spokane-Augusta Ave (Augusta & Fiske) | 5/30 |

Table 2: Maximum AQI values and pollutant concentrations for this year to date.

| Pollutant | AQI | | Location | Date |
|-------------------|--------------------------------------|------|---------------------------------------|------|
| O ₃ | 49 (conc. = 0.053 ppm) | Good | Turnbull NWR | 5/28 |
| PM ₁₀ | 45 (conc. = 49 µg/m ³) | Good | Spokane-Augusta Ave (Augusta & Fiske) | 3/5 |
| PM _{2.5} | 48 (conc. = 11.5 µg/m ³) | Good | Spokane-Augusta Ave (Augusta & Fiske) | 2/3 |

Table 3: AQI summary as of May 31, 2020

| Category | Number of days in May | Number of days this year to date |
|--|-----------------------|----------------------------------|
| Good (0-50) | 31 | 152 |
| Moderate (51-100) | 0 | 0 |
| Unhealthy for Sensitive Groups (101-150) | 0 | 0 |
| Unhealthy (151-200) | 0 | 0 |
| Very Unhealthy (201-300) | 0 | 0 |
| Hazardous (>300) | 0 | 0 |

Appendix 1 – National Ambient Air Quality Standards

The Clean Air Act requires EPA to set National Ambient Air Quality Standards (NAAQS) for six common air pollutants, carbon monoxide (CO), lead (Pb), nitrogen dioxide (NO₂), particulate matter (PM₁₀ and PM_{2.5}), ground-level ozone (O₃) and sulfur dioxide (SO₂; Table A-1). These are known as “criteria” pollutants because the US EPA established regulatory limits to concentrations in ambient air using human health or environmentally based criteria. Carbon monoxide, particulate matter and ozone are monitored in Spokane County by the Spokane Regional Clean Air Agency (SRCAA) and the Washington State Department of Ecology (Ecology).

Table A-1: National Ambient Air Quality Standards

| Pollutant [links to historical tables of NAAQS reviews] | | Primary/ Secondary | Averaging Time | Level | Form |
|--|-------------------|-----------------------|------------------------|---|---|
| Carbon Monoxide (CO) | | primary | 8 hours | 9 ppm | Not to be exceeded more than once per year |
| | | | 1 hour | 35 ppm | |
| Lead (Pb) | | primary and secondary | Rolling 3 month period | 0.15 µg/m ³ (1) | Not to be exceeded |
| Nitrogen Dioxide (NO₂) | | primary | 1 hour | 100 ppb | 98th percentile of 1-hour daily maximum concentrations, averaged over 3 years |
| | | primary and secondary | 1 year | 53 ppb (2) | Annual Mean |
| Ozone (O₃) | | primary and secondary | 8 hours | 0.070 ppm (3) | Annual fourth-highest daily maximum 8-hour concentration, averaged over 3 years |
| Particle Pollution (PM) | PM _{2.5} | primary | 1 year | 12.0 µg/m ³ | annual mean, averaged over 3 years |
| | | secondary | 1 year | 15.0 µg/m ³ | annual mean, averaged over 3 years |
| | | primary and secondary | 24 hours | 35 µg/m ³ | 98th percentile, averaged over 3 years |
| | PM ₁₀ | primary and secondary | 24 hours | 150 µg/m ³ | Not to be exceeded more than once per year on average over 3 years |
| Sulfur Dioxide (SO₂) | | primary | 1 hour | 75 ppb (4) | 99th percentile of 1-hour daily maximum concentrations, averaged over 3 years |
| | | secondary | 3 hours | 0.5 ppm | Not to be exceeded more than once per year |

(1) In areas designated nonattainment for the Pb standards prior to the promulgation of the current (2008) standards, and for which implementation plans to attain or maintain the current (2008) standards have not been submitted and approved, the previous standards (1.5 µg/m³ as a calendar quarter average) also remain in effect.

(2) The level of the annual NO₂ standard is 0.053 ppm. It is shown here in terms of ppb for the purposes of clearer comparison to the 1-hour standard level.

(3) Final rule signed October 1, 2015, and effective December 28, 2015. The previous (2008) O₃ standards additionally remain in effect in some areas. Revocation of the previous (2008) O₃ standards and transitioning to the current (2015) standards will be addressed in the implementation rule for the current standards.

(4) The previous SO₂ standards (0.14 ppm 24-hour and 0.03 ppm annual) will additionally remain in effect in certain areas: (1) any area for which it is not yet 1 year since the effective date of designation under the current (2010) standards, and (2) any area for which implementation plans providing for attainment of the current (2010) standard have not been submitted and approved and which is designated nonattainment under the previous SO₂ standards or is not meeting the requirements of a SIP call under the previous SO₂ standards (40 CFR 50.4(3)). A SIP call is an EPA action requiring a state to resubmit all or part of its State Implementation Plan to demonstrate attainment of the require NAAQS.

Appendix 2 – Air Quality Index

The Air Quality Index (AQI) is EPA’s color-coded tool for communicating daily air quality to the public and can be calculated for any of the criteria pollutants except lead, provided monitoring data are available. An index value above 100 indicates that the concentration of a criteria pollutant exceeded the limit established in the NAAQS. Categories of the AQI are “Good” (green, 0-50), “Moderate” (yellow, 51-100), “Unhealthy for Sensitive Groups” (USG; orange, 101-150), “Unhealthy” (red, 151-200), “Very Unhealthy” (purple, 201-300) and “Hazardous” (maroon, 301-500; Table A-2).

Table A-2: Air pollutant breakpoints for the Air Quality Index.

| Air Quality Index Levels of Health Concern | Color Code | Index Numerical Value | Breakpoints | | | | Health Effects |
|--|------------|-----------------------|--|--|---|-----------------|---|
| | | | O ₃ (ppm) 8-hour | PM _{2.5} (µg/m ³) 24-hour | PM ₁₀ (µg/m ³) 24-hour | CO (ppm) 8-hour | |
| Good | Green | 0-50 | 0.000-0.054 | 0.0-12.0 | 0-54 | 0.0-4.4 | Air quality is considered satisfactory and air pollution poses little or no risk. |
| Moderate | Yellow | 51-100 | 0.055-0.070 | 12.1-35.4 | 55-154 | 4.5-9.4 | Air quality is acceptable; however, for some pollutants there may be a moderate health concern for a very small number of people who are unusually sensitive to air pollution. |
| Unhealthy for Sensitive Groups | Orange | 101-150 | 0.071-0.085 | 35.5-55.4 | 155-254 | 9.5-12.4 | People especially sensitive to air pollution may experience health effects. The general public is not likely to be affected. An AQI in this category or above indicates that air pollution exceeds levels acceptable under federal air quality standards. |
| Unhealthy | Red | 151-200 | 0.086-0.105 | 55.5-150.4 | 255-354 | 12.5-15.4 | Everyone may begin to experience health effects; members of sensitive groups may experience more serious health effects. |
| Very Unhealthy | Purple | 201-300 | 0.106-0.200 | 150.5-250.4 | 355-424 | 15.5-30.4 | Health alert: everyone may experience more serious health effects. |
| Hazardous | Maroon | >300 | 0.201 to the Significant Harm Level* (0.600 ppm, 2 hour average) | 250.5+ | 425+ | 30.5+ | Health warnings of emergency conditions. The entire population is more likely to be affected. |

*The significant harm level (SHL) is set at a level that represents imminent and substantial endangerment to public health.

Appendix 3

Table A-3: Summary air quality data for May for air monitoring stations in Spokane County. Particulate matter mass concentration is reported as 24-hour averages in micrograms per cubic meter of air ($\mu\text{g}/\text{m}^3$) and daily 8-hour maximum ozone concentrations are reported in parts per million (ppm). Ozone monitoring for 2020 began on the 6th at Greenbluff and the 7th at Turnbull. The $\text{PM}_{2.5}$ BAM at Augusta was offline for annual maintenance the 21st through the 26th and the Turnbull PM_{10} BAM did not report on the 2nd through the 4th because of a power outage. Blowing dust from a gravel lot near the PM_{10} monitor at Turnbull caused an elevated reading on the 10th. Because of the localized nature of the dust, the mass concentration is reported here but not elsewhere in this report.

| Date | Ozone Greenbluff (8 hour max, ppm) | Ozone Turnbull NWR (8 hour max, ppm) | $\text{PM}_{2.5}$ Augusta & Fiske BAM (24 hour avg, $\mu\text{g}/\text{m}^3$) | $\text{PM}_{2.5}$ Broadway & Glenn BAM (24 hour avg, $\mu\text{g}/\text{m}^3$) | $\text{PM}_{2.5}$ Colbert TEOM (24 hour avg, $\mu\text{g}/\text{m}^3$) | $\text{PM}_{2.5}$ Monroe & Wellesley nephelometer (24 hour avg, $\mu\text{g}/\text{m}^3$) | PM_{10} Augusta & Fiske TEOM (24 hour avg, $\mu\text{g}/\text{m}^3$) | PM_{10} Turnbull NWR BAM (24 hour avg, $\mu\text{g}/\text{m}^3$) |
|------|------------------------------------|--------------------------------------|--|---|---|--|--|--|
| 5/1 | | | 4.3 | 4.7 | 5.2 | 5.6 | 18 | 11 |
